PROFESSIONAL SUMMARY

Fresh Computer Science graduate with experience developing web and mobile applications, integrating APIs and Firebase services, and building user-focused application workflows. Worked with JavaScript, TypeScript, Svelte, Node.js, Flutter and Firebase across industrial training and academic projects. Enjoys problem-solving, translating requirements into functional applications and refining implementations through testing, feedback and iteration.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, Dart

Frameworks & Development: Svelte, Vue.js, Node.js, Vite, Flutter

Data & Integration: Firebase, Firestore, Firebase Authentication, Firebase Storage, REST APIs, Public APIs, GTFS

Tools: Git, GitHub, Figma, VS Code, npm, Vercel

Additional: Responsive Web Development, Dashboard Prototyping, Map-Based Applications, User Flow Design

EXPERIENCE

Software Developer Intern — Digital Twin Team

Impact Business Solutions Sdn. Bhd. | Mar 2026 – Aug 2026

- Designed and iterated Figma prototypes for multiple Digital Twin dashboards, including Infectious Disease, MINDEF and Federated Digital Twin projects, translating domain research and stakeholder feedback into information hierarchies, maps, cards, popup interactions and operational dashboard flows.
- Researched, verified and organised geospatial and asset data using QGIS and Excel, preparing coordinates and supporting project information while assessing data availability and reliability before incorporating verified information into dashboard designs and implementation support.
- Contributed to Federated Digital Twin research and prototyping for Smart City and operational use cases, designing map interactions, information overlays, simulation concepts and structured asset and incident views that helped shape a more focused dashboard structure across infrastructure, disaster and citizen-management scenarios.
- Developed a standalone public-transport web dashboard using Node.js, Svelte, Vite and public GTFS data, integrating vehicle tracking, route information, map-based interactions and journey recommendations for different travel preferences.

PROJECTS

Public Transport Tracker & Route Planner — Internship Project

Svelte · Vite · Node.js · GTFS

- Developed a map-based public transport application using public GTFS data, integrating vehicle tracking, location search, route information and journey planning into a unified interface for exploring available public-transport options.
- Built journey-planning logic for Recommended, Least Walking, Least Stops and Fastest Time routes, incorporating walking segments, stops, transfers and available arrival information to provide route recommendations for different travel preferences.

TeleCardio — Final Year Project

Flutter · Dart · Firebase Firestore · Firebase Authentication · Firebase Storage

- Developed a cardiovascular-focused telemedicine application that supported patient and doctor workflows across health monitoring, cardiovascular risk assessment, appointment booking and remote consultation, bringing key healthcare interactions into a unified mobile platform.
- Implemented role-based application workflows for medication management, electronic prescriptions, pharmacy access and health-record management, using Firebase Authentication, Firestore and Storage to support secure access and persistent application data.

EDUCATION

Bachelor of Computer Science with Honours (Network Engineering)

Universiti Malaysia Sabah | 2022 - 2026 | Current CGPA: 3.55

Achievements & Leadership

- Dean's List — Semesters 1-4 & 7
- Music Book Manager — UMS Chinese Orchestra (2023–2024)

CERTIFICATIONS

Cisco Networking Academy

- CCNAv7: Introduction to Networks
- CCNAv7: Switching, Routing & Wireless Essentials
- CCNAv7: Enterprise Networking, Security & Automation
- Cybersecurity Essentials

Huawei Certified ICT Associate

- HCIA – Datacom | Valid through Aug 2026
